# 3.IDEA

## Rhythmic Space "Dancing Ribbon"

### a. Space Definition:

With the aid of a dancing ribbon, the eight functional spaces in the vicinity are ingeniously intertwined, integrating the historic culture of Chengdu's "Shu Embroidery" and achieving organic integration of spaces and deep cultural expression. The freely traversing ribbon showcases a unique design language and visual experience.

The ribbon guides visitors through the interior spaces, while cleverly resolving the traditional, static square-box style of space presentation.

Rhythmic Space  
"Dancing Ribbon"

#### **b. Circulation Guidance**

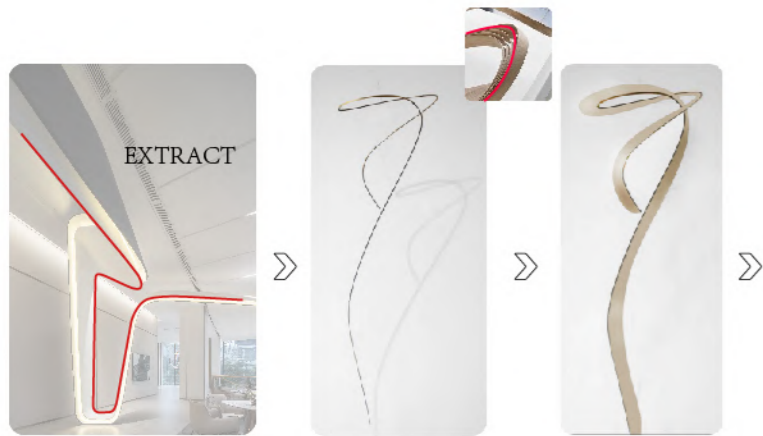

The ribbon rises from the ground, wrapping around the interior of the building, connecting the various levels, making the circulation more coherent, and bringing rhythm and vitality to the space.

## AREA AISLE

### Artistic floating ribbon charm

Combined with the element of empty streamers, extended to the ceiling to do art hanging ornaments. The material of wood is used to form artistic streamers, which are suspended below the ceiling.

## **4.HUMANISTIC SOCIAL INTERACTION**

### Terraced Plaza:

Floor-to-ceiling windows reveal the internal "ribbon" art space, attracting the flow of people. The stepped square, reading café, and parent-child interaction area enhance social cohesion.

Public spaces serve as the link connecting the lives of the surrounding communities. Large-scale floor-to-ceiling windows, in combination with leisurely steps, create a multifunctional space where natural light serves as the primary source of illumination, bridging the gap between people and nature. The "theater-style steps" can function as a place for people to relax, wait, read, communicate, and negotiate, while also becoming a popular venue for community activities, transforming into a "traffic hub" for the community.

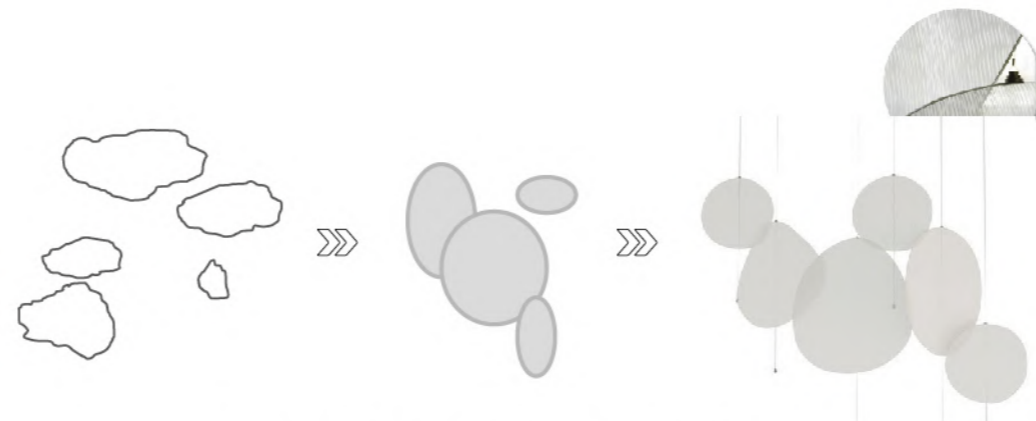

### Reading Café:

The "books + shelves" concept creates a thematic three-dimensional space, attracting learning and interaction, and using reading to enhance social cohesion.

### **CHILDREN'S ACTIVITY AREA**

The open space supports people of different ages and needs to come together for learning, interaction, and gathering. The spatial divisions created by combining sofas are also designed to facilitate multi-directional communication, providing opportunities for spontaneous encounters. With reading as the focal point, it enhances the social cohesion among individuals.
