

LIGHT WATERFALL

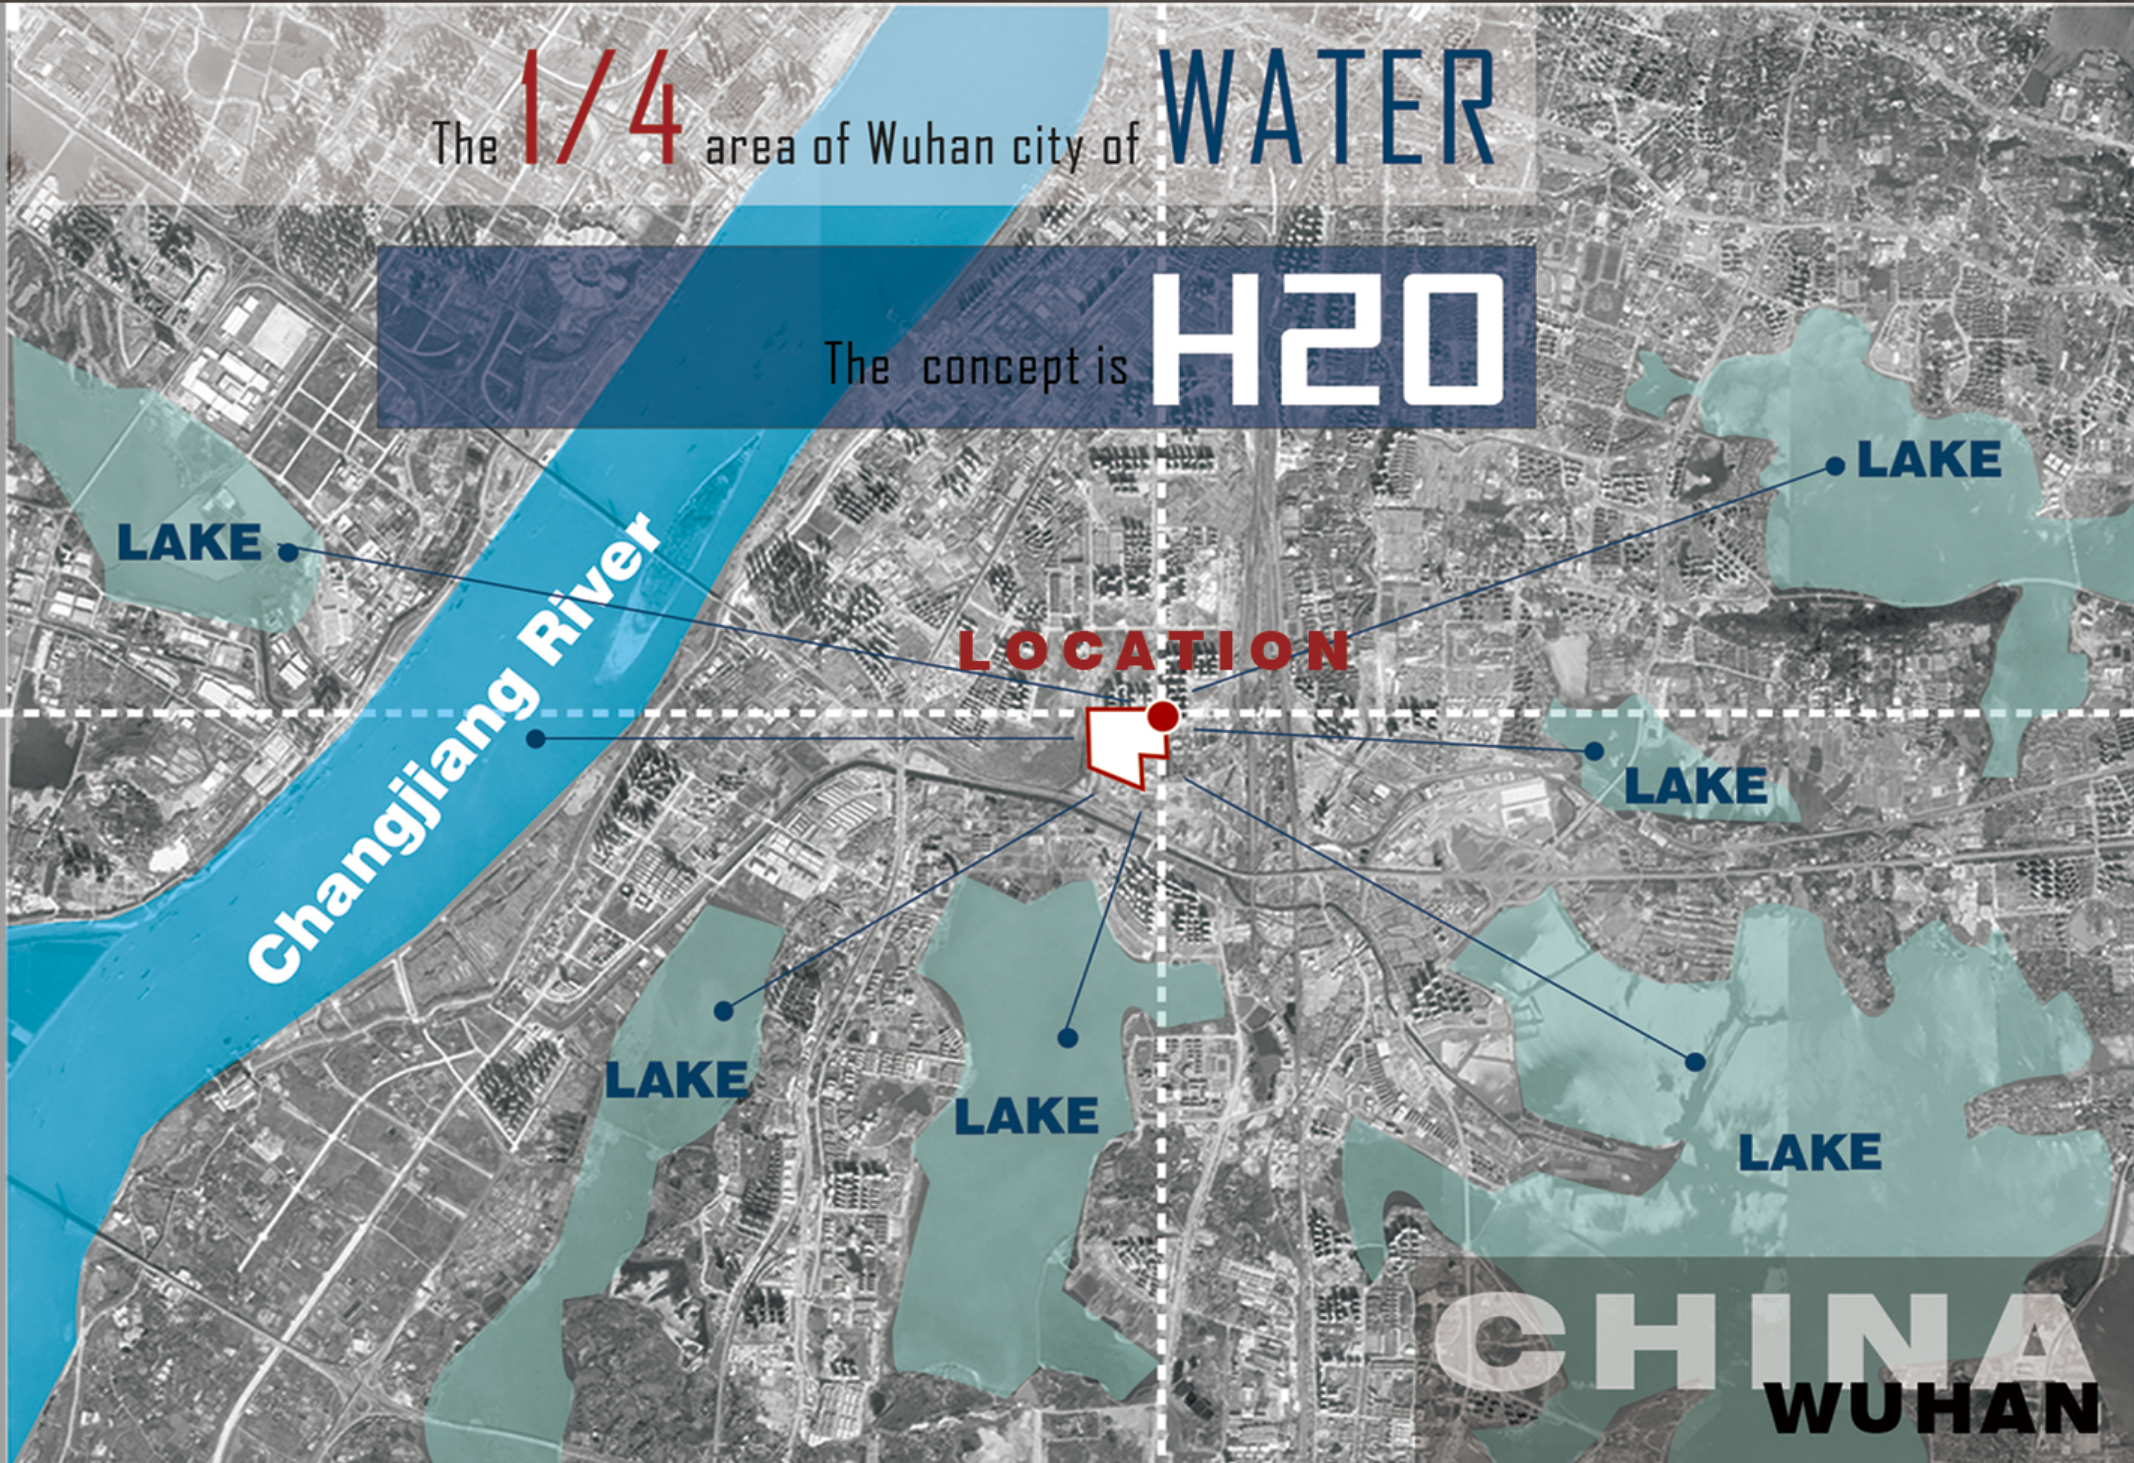

Kris Lin International Design

LOCATION 01

■ This is a show and sales space. We take part in architectural, interior, FF&E as well as landscape design aiming at to integrate the interior, architectural and landscape design together to form a show and experience area like art museum.

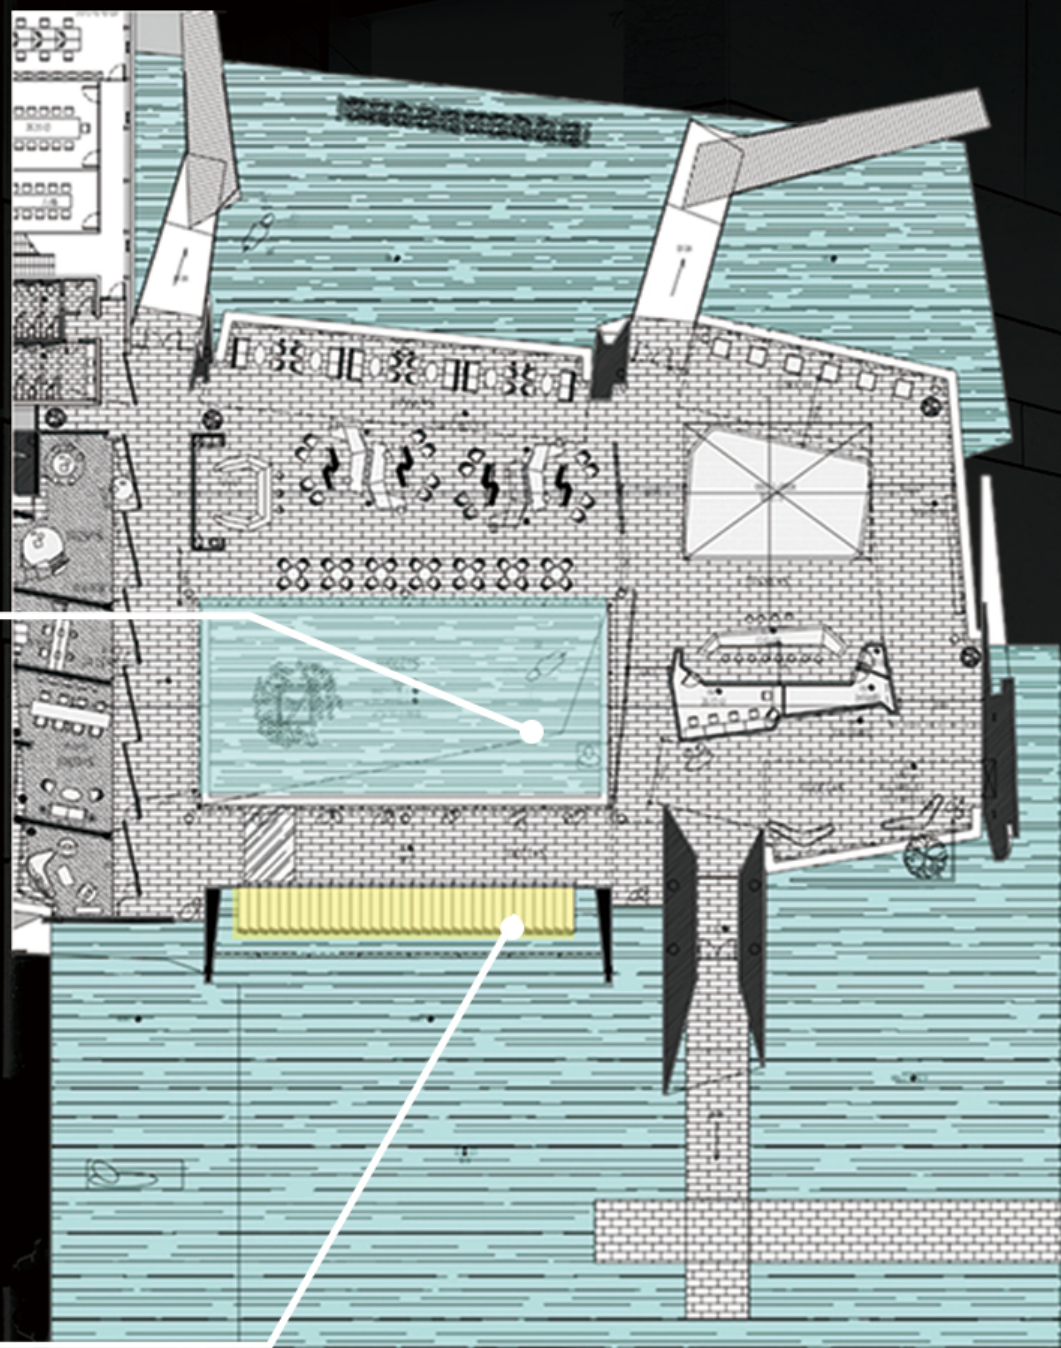

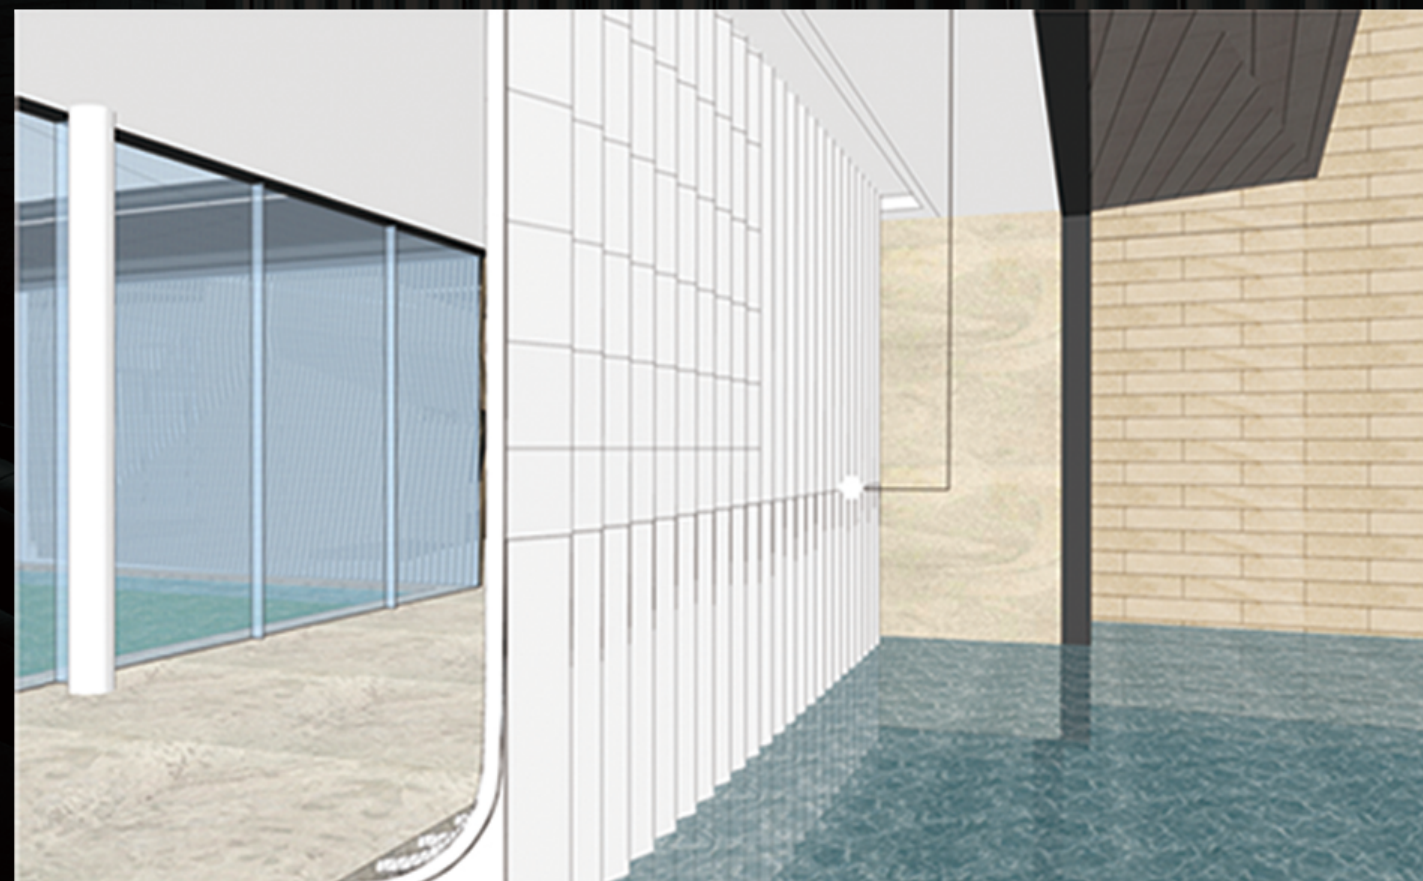

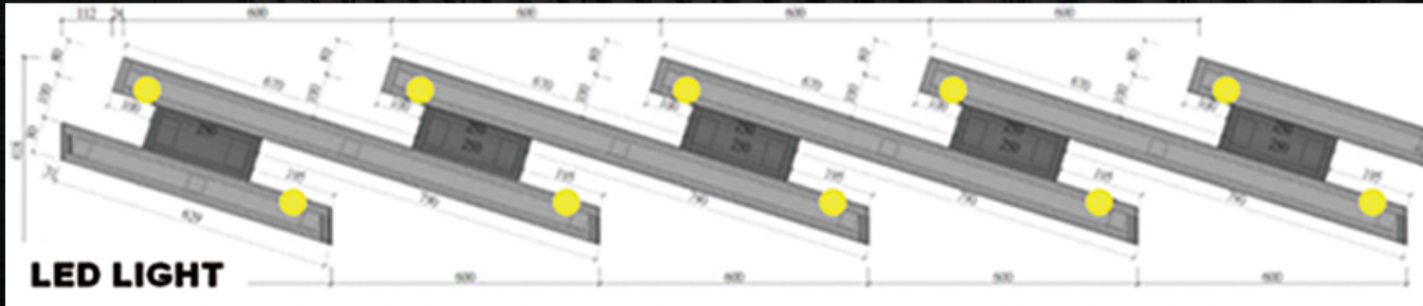

Water is the theme in this case. The architectural design conveys the relation of water, architecture and nature by a transparent concept. The interior is show area and meeting area which is separated by a dimensional lattice wall. Aside the meeting area is a water pond surrounded by continuous glass wall, which becomes the key interior landscape.

02

LIGHT WATERFALL: CONCEPT

THERE IS JUST LIGHT. WITHOUT WATER

■ We design a luminous water curtain wall for exterior elevation of the architecture to echoing the theme of water. Luminous water curtain wall is consisted by LED light strips, the running light strip looks like running water, which is reflected in the water pond. The water curtain wall has two surfaces, one is the exterior elevation of the architecture and the other is the interior background wall.
