

Space 5.7

Taiwan Good Design Award

Space 5.7

Nowadays, more than 280,000 people living in subdivided flats in Hong Kong. The average per capita floor area is 5.7 square metres.

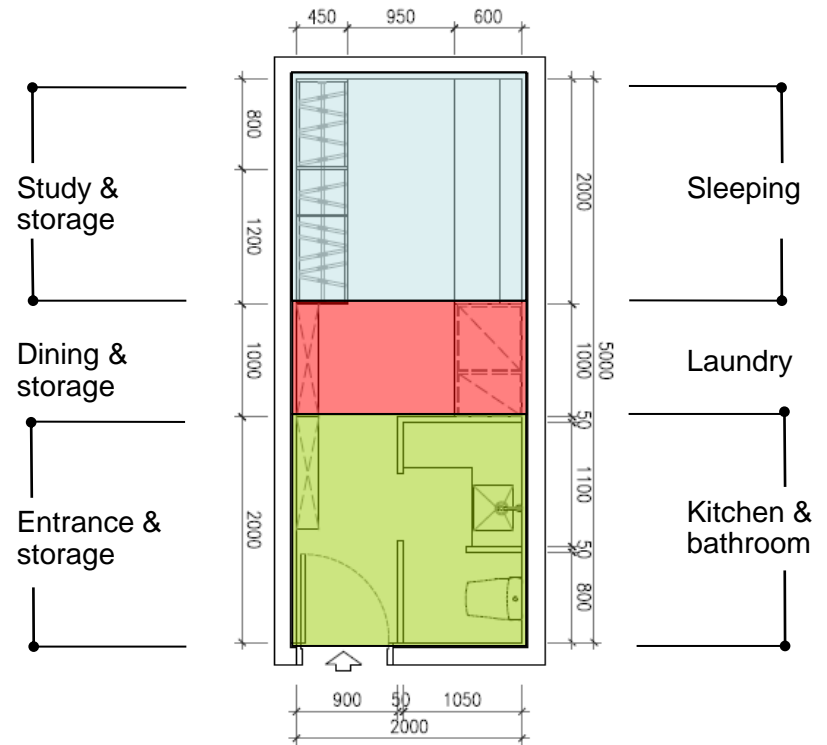

Living in such poor conditions may lower their self-esteem and tend to become less sociable and introverted. People conflict and compete for space as the overcrowded area.

The project is use the multifunctional furniture to make more room for living, studying and sleeping.

Everyone deserves to be respected and life with dignity.

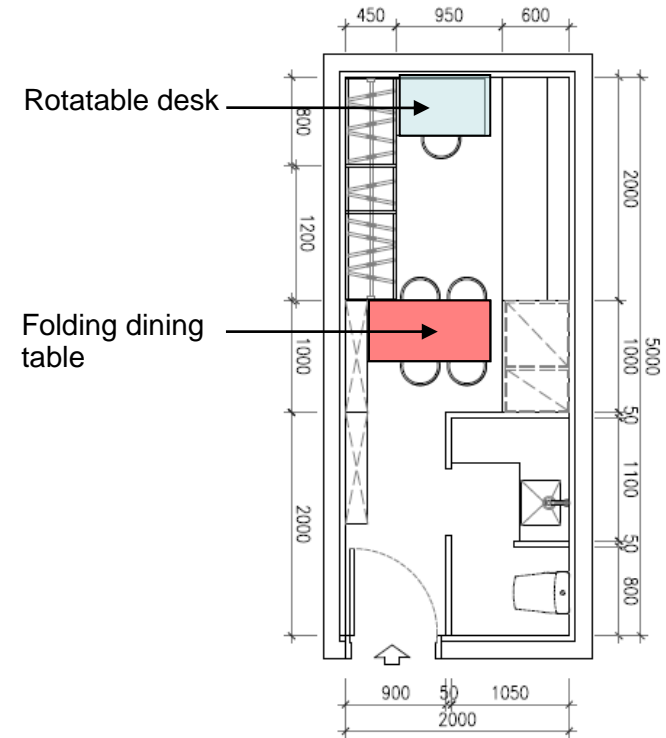

Taiwan Good Design Award

Space 5.7

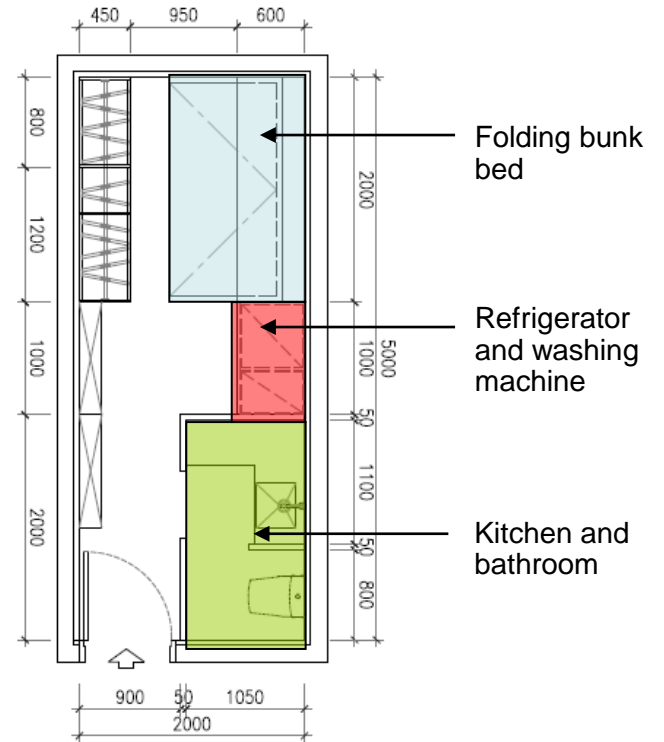

The project is a typical subdivided flats in Hong Kong. 2m wide by 5 m length, four peoples are living in only ten square meter, including kitchen and bathroom. The project is to relocate the function of the living, sleeping and dining area.

Space 5.7

Desk and dining table are only used 2 to 3 hours a day, changed to use the rotatable desk and folding dining table, can be free more room for living.

Space 5.7

Typical bunk bed are only used 7 to 8 hours a day, changed to use the folding bunk bed, can be free more room for living. Refrigerator and washing machine are relocated into a cabinet.
