

The project aimed to reactivate the public space around the community, transforming and redefining the previous residential conditions of the location. Indoor settings include: Activity Centre for Kids, Reading Room, Indoor Swimming Pool, Gym, Private Banquet Hall, Coffee bar and other activity areas. For the existence of both outdoor landscape and the indoor space, even though it is relatively limited, people can interact actively in this open and flowing space.

## Concept

1.MOUNTAIN

2.CURVE

3.3D DESIGN

4.COMPLETE

The project base is surrounded by mountains, with natural landscape resources such as Zijin Mountain and Hongshan Forest Zoo. The designer, inspired by the shape of the rolling hills, creates the surficial landscape which extends down to the visual surface of the building. It connects the surficial and underground space. The petal-shaped landscape staircase leads people into the main functional space of the building.

The strategy applied in this project is to combine the surficial landscape space and the underground construction, integrating the concept of mountain shapes to create a landscape -style building.
